Growth **R**estriction **A**nd **C**ytomegalovirus in Newborns: A Service **E**valuation in the **U**nited **K**ingdom

NeoTRIPS

Could a small baby be telling us something bigger?

- Some perinatal services screen babies for cCMV if they are antenatally suspected as IUGR on the fetal scans.
- Other places screen babies for cCMV only if symmetrical IUGR is detected postnatally.
- In some units ALL premature babies are screened for cCMV once they are admitted to the neonatal unit irrespective of suspicion.

GRACE-UK wants to know what is happening in your perinatal service!

Project Aim: **To identify current approaches to the detection and management of congenital CMV in IUGR newborns across perinatal services in the United Kingdom.**

Who is this project for?

- ✔ NeoTRIPs Regional Leads & Local Leads
- ✔ Neonatal Resident Doctors and Fellows
- ✔ Infectious Disease Resident Doctors and Fellows

What does this project involve?

- ✔ Completion of 2 surveys
- ✔ Prospective data collection over 3 months

Join either WEBINARs on Tuesday 22nd September & Thursday 1st October 2026 at 18:30 UK time to find out more!
